Key Facts About Stroke

FACT #1:

stroke kills brain cells

Stroke happens when a clot or rupture interrupts blood flow to the brain. Without oxygen-rich blood, brain cells die.

FACT #2:

types of stroke

Ischemic caused by a clot, Hemorrhagic caused by a rupture and Transient Ischemic Attack (TIA) or “warning stroke” caused by a temporary blockage.

FACT #3:

about one in four stroke survivors is at risk for another

Fortunately, up to 80 percent of second clot-related strokes may be preventable.

FACT #4:

prevention is key

Had a stroke? Work with your doctor to identify the cause and create a plan to prevent another. This may include managing high blood pressure, making healthy lifestyle choices and taking medications as recommended by your doctor.

After an ischemic stroke or TIA, most patients will be prescribed an antiplatelet or anticoagulant therapy.

F.A.S.T. time lost is brain lost

FACT #5:

Now that you know prevention, here's how you spot one.
