

When healthcare providers apply the most up-to-date evidence-based treatment guidelines, outpatient outcomes improve and lives can be saved! That's the simple truth behind our drive for continuous quality improvement.

The American Heart Association's comprehensive suite of ambulatory care quality improvement initiatives can help you advance further and faster in the quest for better outpatient care. Our initiatives work together to reduce cardiovascular deaths, heart attacks, and strokes among the 100 million+ Americans living with hypertension, cholesterol, and/or Type 2 Diabetes.

We can bring any or all of our 3 quality improvement initiatives to your organization. We provide ongoing resources and training, and highlight your progress and successes through national and local recognition opportunities. Providers throughout Minnesota have benefited by participating and you can be next!

What We Offer

- M.A.P. Framework
- Management Guide
- Webinars with CME Credits
- Podcast Series
- Patient & Provider Resources
- National Recognition with annual data submission
