BOOT CAMP**

## 'NEURO IMAGING OF ACUTE STROKE'

ALICIA RICHARDSON, MSN, RN, ACCNS-AG, ANVP-BC  
WENDY SMITH, MA, RN, MBA, SCRN, FAHA  
LYNN HUNDLEY, APRN, CNRN, CCNS, ANVP-BC

**American  
Stroke  
Association.**  
A division of the  
American Heart Association.

2

## DISCLOSURES

Alicia Richardson: Stryker Neurovascular Consultant

Wendy Smith: None

Lynn Hundley: Medtronic: Speaker Bureau, modest; Arbor Pharmaceuticals: Speaker Bureau, modest

3

3

## NCCT

<b>Bone</b>	Very White
<b>Acute Blood</b>	Very White
<b>Enhanced tumor</b>	Very White
<b>Subacute Blood</b>	Light Grey
<b>Muscle</b>	Light Grey
<b>Grey Matter</b>	Light Grey
<b>White Matter</b>	Medium Grey
<b>CSF</b>	Medium Grey to Black
<b>Air, Fat</b>	Very Black

### WHAT DO THESE WORDS MEAN?

<b>Diffuse</b>	• It's everywhere	<b>Edema</b>
<b>Mass effect</b>	• Stuff is pressing on stuff	
<b>Sulcal Effacement</b>	• Now you can't see the difference between the sulci & gyri	
<b>Cytotoxic</b>	• Swelling of white and grey matter	
<b>Midline shift</b>	• Stuff is pressing really hard, into the other hemisphere hard	

6

6

## WHAT DO THESE WORDS MEAN?

**Encephalomalacia** • Loss of brain tissue, dark area

**Hypointense** • Dark

**Hypodense** • Dark area

**Isointense** • Neutral or same as other tissues

**Hyperintense** • Bright

**Hyperdense** • Bright area

## NCCT CHECKLIST

### 1. EVIDENCE OF HEMORRHAGE?

- a) Ventricular
- b) Subdural
- c) Subarachnoid
- d) Epidural

Is it intra-axial?

- a) Follow the distribution of an arterial branch?
- b) Align itself with the anatomical location of the perforating arteries?

35

35

## NCCT CHECKLIST

- 2. IS THERE FRANK HYPODENSITY?
- 3. IS THERE MASS EFFECT WITH A SHIFT CROSS MIDLINE?
- 4. EARLY INFARCT SIGNS?
  - A) SULCAL EFFACEMENT
  - B) BLURRING OF THE GRAY- WHITE INTERFACE
  - C) HYPERDENSE ARTERY
- 5. DIFFUSE BRAIN EDEMA?
  - A) OVERALL FLATTENING OF SULCI
  - B) SMALL CISTERNAL SPACES
  - C) SMALL VENTRICLES
  - D) DIFFUSE LOSS OF GRAY-WHITE DIFFERENTIATION

36

36

## NCCT CHECKLIST

### 6. IS THERE HYDROCEPHALUS?

- a) Opening of the temporal horns
- b) Localized enlargement of the lateral ventricles suggesting non-communicating hydrocephalus

### 7. IS THERE EVIDENCE OF CALCIFICATION AND IS IT IN AREAS THAT DO BECOME CALCIFIED?

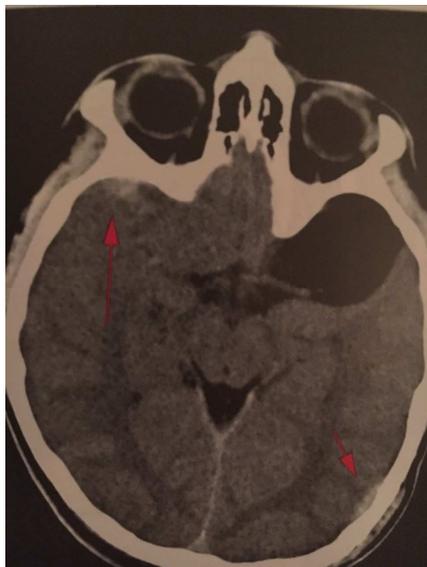

### 8. DO YOUR CT FINDINGS MATCH THE CLINICAL PICTURE?!

37

37

## "JEWEL PATHOLOGY"

38

38

## ISCHEMIC CHANGES ON CT

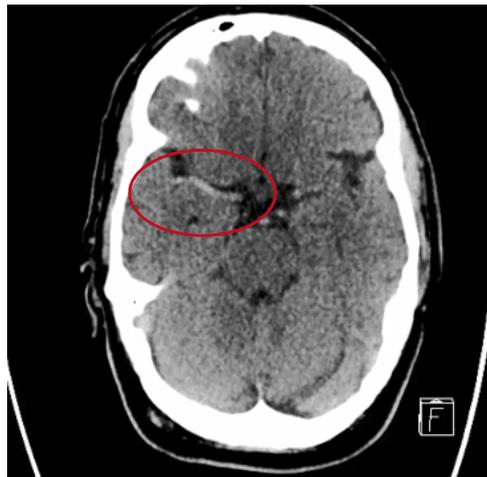

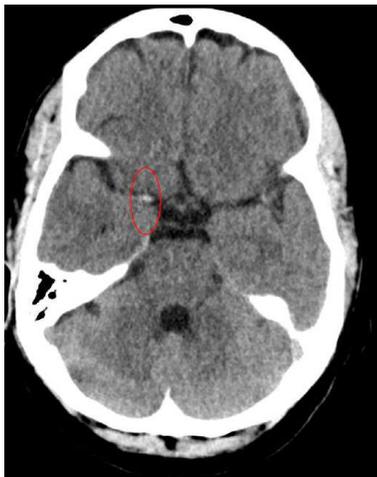

39

39

## HYPERDENSE MCA SIGN

40

40

**Cortical** penetrating branches of ACA, MCA, or PCA  
(~20-30%)

**Basal Ganglia-** lenticulostriate perforators  
(~40-50%)

**Thalamus-** thalamogeniculate perforators  
(~20-30%)

**Pons-** pontine perforators  
(~8%)

**Cerebellum-** AICA, PICA, or SCA penetrating branches  
(~8%)

41

41

## CT ANGIOGRAPHY

**CTA**

- **VESSEL IMAGING**
  - Occlusions
  - Stenosis
  - Aneurysms
- **SHOULD PERFORM HEAD AND NECK**
  - Carotid/vertebral arteries
  - Dissection
  - "Road map" for intervention

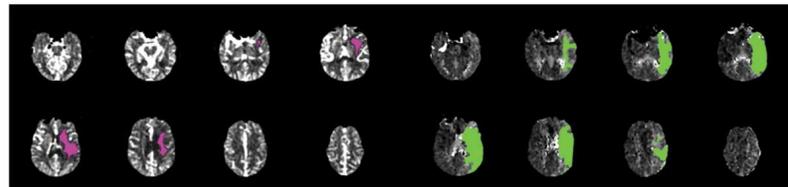

42

42

## CT PERFUSION

### CTP

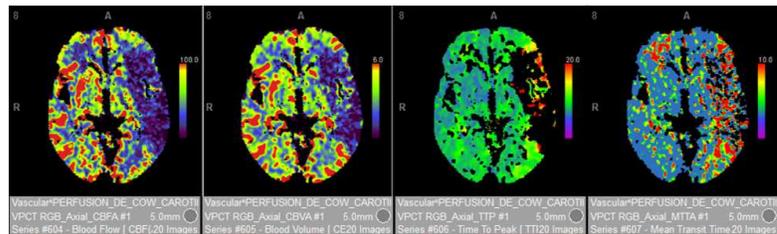

- **CEREBRAL BLOOD FLOW/VOLUME**
  - Helps with timing- Unknown onset, late window
  - Infarct vs penumbra to show at risk tissue

Volume of Ischemic Core, 23 ml

Volume of Perfusion Lesion, 128 ml

Mismatch volume, 105 ml  
Mismatch ratio, 5.6

43

43

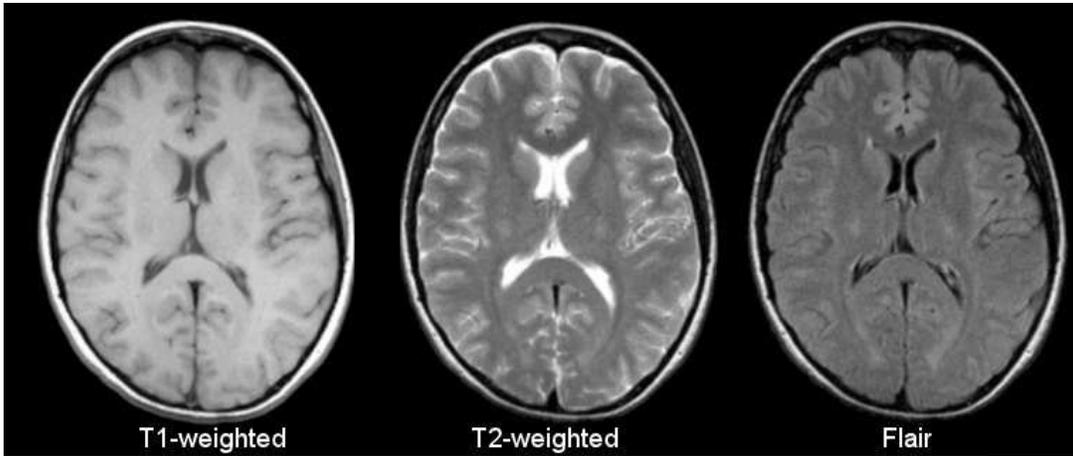

## MRI – T1 AND T2

	T1	T2	T2 Flair
<b>Bone</b>	Very Black	Very Black	Very Black
<b>Air</b>	Very Black	Very Black	Very Black
<b>Muscle</b>	Dark Grey	Dark Grey	Dark Grey
<b>Grey Matter</b>	<b>Grey</b>	<b>White</b>	<b>White</b>
<b>White Matter</b>	<b>White</b>	<b>Grey</b>	<b>Grey</b>
<b>Fat</b>	White	Grey	
<b>CSF</b>	<b>Very Black</b>	<b>Very White</b>	<b>Very Black</b>
<b>Acute Ischemia</b>	Dark Grey	Light Grey to White	
	Good for Anatomical Definition	Good for Identifying Edema	Best for Identifying Edema

## STROKE MRI SEQUENCES

**GRE**

- Highly sensitive to blood
- Blood- Black
- CSF- White
- Must be done with ADC/DWI otherwise hemorrhage can be missed

**SWI**

- Also highly sensitive to blood
- Blood- Black
- CSF- Grey

**ADC**

- Ischemic tissue- Dark grey/Black
- CSF- White
- Normalizes by 5-10 days, good for lesion age

**DWI**

- Highly sensitive to infarcted tissue
- Ischemic tissue- White
- CSF- Dark grey/Black
- May be positive in up to 50% of TIA patients with full symptom resolution
- Can be used to select tPA candidates outside window

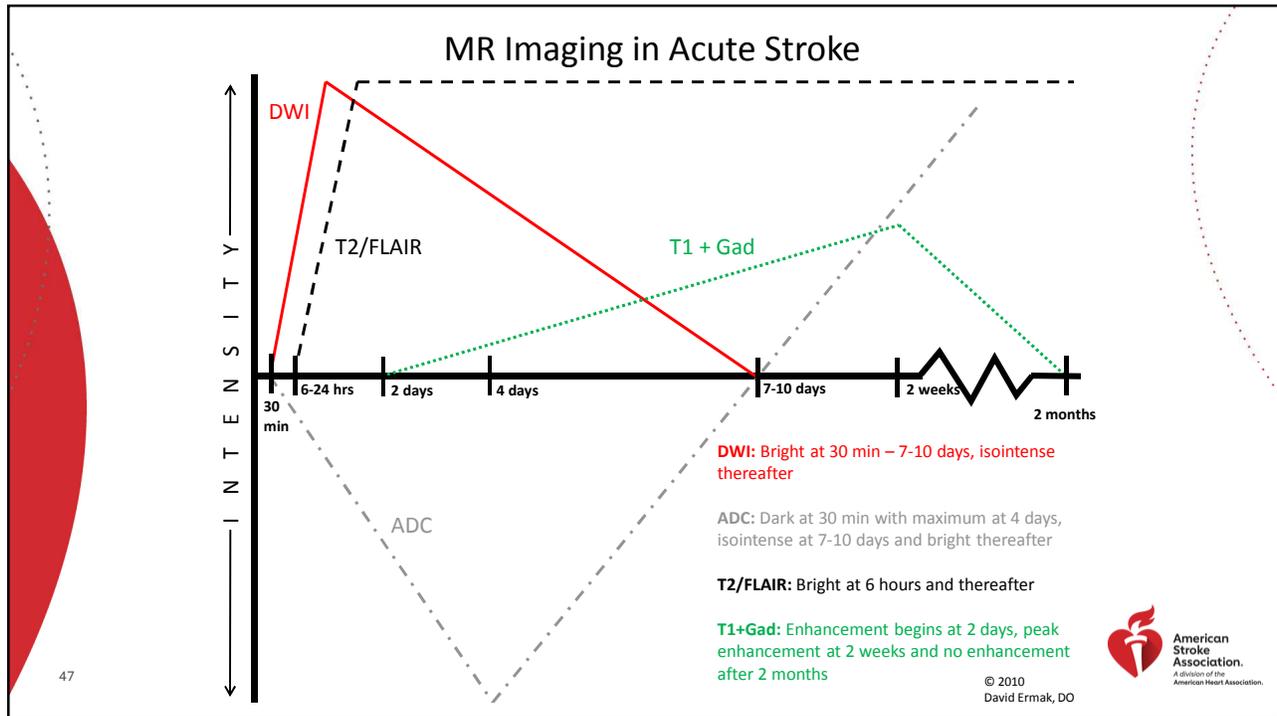

**Flair**

- Benefit- Suppresses CSF signal to enhance older infarcts
- Bright white= old
